The intriguing history of Mount Everest dates back to the 19th century when British Great Trigonometric Surveyors named it after Sir George Everest, the surveyor general of India at the time. However, the mountain is known by different names in various local languages, such as Sagarmatha in Nepal and Chomolungma in Tibet.

2. Mount Everest's Geological Formation:

Mount Everest, formed millions of years ago, is a part of the Himalayan orogenic belt. It originated as sediments deposited on the floor of a prehistoric sea. Over time, tectonic forces and the collision of the Indian and Eurasian plates led to the uplift of these sediments, giving birth to the great Himalayan range.

5. Sherpas and their Role:

The indigenous Sherpas play an invaluable role in supporting climbers during their Everest expeditions. These brave and experienced mountaineers not only guide climbers through treacherous routes but also carry essential supplies, set up camps, and assist in emergencies. Mount Everest, Sanskrit and Nepali Sagarmatha, Tibetan Chomolungma, Chinese (Pinyin) Zhumulangma Feng or (Wade-Giles romanization) Chu-mu-lang ma Feng, also spelled Qomolangma Feng, mountain on the crest of the Great Himalayas of southern Asia that lies on the border between Nepal and the Tibet Autonomous Region of China, at 27°59′ N 86°56′ E. Reaching an elevation of 29,032 feet (8,849 metres), Mount Everest is the highest mountain in the world. Like other high peaks in the region, Mount Everest has long been revered by local peoples. Its most common Tibetan name, Chomolungma, means “Goddess Mother of the World” or “Goddess of the Valley.” The Sanskrit name Sagarmatha means literally “Peak of Heaven.” Its identity as the highest point on the Earth’s

surface was not recognized, however, until 1852, when the governmental Survey of India established that fact.

Mount Everest is difficult to get to and more difficult to climb, even with the great advances made in equipment, transportation, communications, and weather forecasting since the first major expeditions in the 1920s. The mountain itself lies in a highly isolated location. There are no roads in the region on the Nepalese side, and before the 1960s all goods and supplies had to be carried long distances by humans and pack animals. The southern route via the Khumbu Icefall and the South Col is the one most commonly taken by climbers attempting to summit Everest. It is the route used by the 1953 British expedition when New Zealander Edmund Hillary and Sherpa Tenzing Norgay became the first men known to have reached Everest's summit.
