

Interaction Of Information And Energy As The Primary Cause For Origination Of

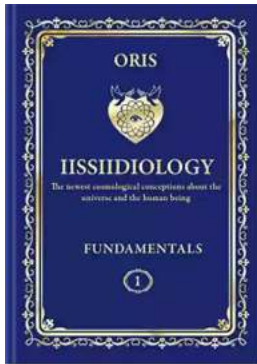

Have you ever wondered about the origins of the universe? The age-old question of how everything came into existence has puzzled scientists, philosophers, and curious minds alike. While the quest for understanding continues, recent research points towards the interaction between information and energy as the primary cause for the origination of our magnificent cosmos.

The Dance of Information and Energy

At its core, the universe operates based on the intricate interplay between information and energy. These two fundamental entities are inseparable and

constantly interact with one another to shape the laws of physics and the fabric of reality as we know it.

Information, as a concept, can be thought of as the encoded structure that contains knowledge, patterns, and possibilities. It is the blueprint of all existence. Energy, on the other hand, is the driving force that brings this information to life, manifesting as matter, motion, and change.

Scientists have long recognized the connection between information and energy, with the famous physicist John Archibald Wheeler even stating, "It from bit." This suggests that everything in the universe, from the smallest subatomic particles to the grandest galaxies, is derived from information.

The Quantum Origins

Delving into the realm of quantum physics, we discover that information and energy are entangled in intricate ways. The very act of observing or measuring a quantum system alters its state, highlighting the fundamental role of information in shaping reality.

Quantum entanglement, a phenomenon where particles become connected and mirror each other's state regardless of distance, further emphasizes the intimate relationship between information and energy. This mysterious entanglement suggests that information can be transmitted instantaneously, defying traditional notions of space and time.

Moreover, recent studies in quantum information theory have shown that information possesses physical properties and can be converted into various forms of energy. This groundbreaking revelation is leading researchers to explore the potential of information-based technologies, such as quantum computing, that could revolutionize our world.

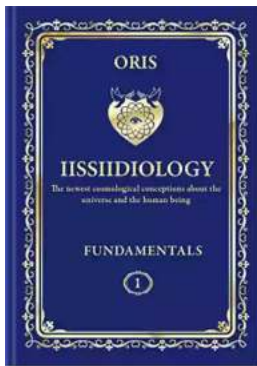

Information as the Seed of Creation

If information and energy are intrinsically linked, could information be the seed from which our universe sprouted? Some theories suggest that the universe itself could be a vast information-processing system, where every interaction, from particle collisions to galaxy formations, is a computation unfolding.

This notion aligns with the concept of the holographic universe, which proposes that all the information about our three-dimensional reality is encoded on a two-dimensional surface. In this holographic paradigm, the universe could be likened to a grand cosmic projection, with information serving as the fundamental building blocks.

As we continue to explore the mysteries of the universe, the profound connection between information and energy emerges as a unifying force. This tantalizing interplay holds the potential to unlock the secrets of our existence and shape the future of scientific advancement for generations to come.

The interaction of information and energy stands as the primary cause for the origination of our universe. This captivating connection hints at a deeper underlying order, where the flow of energy is guided by the encoded structure of information. Understanding this intricate dance unlocks a path towards unraveling the secrets of our existence and pushes the boundaries of scientific exploration.

This book presents the beginning of an overall 20-volume information series titled “The Good News”, which consists of “lissidiology. Fundamentals”, “Commentaries to Fundamentals”, and author’s Song lyrics with a highly-spiritual

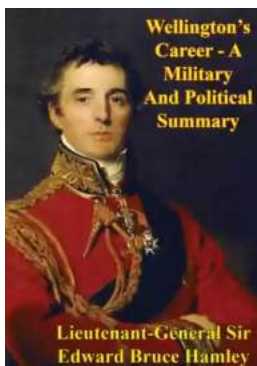

content written to popular and all-loved melodies.

From the very beginning, the author pinpoints the reader's attention upon fundamental notions of lissidiology starting from basic, axiomatic Conceptions.

The book contains the newest interpretation of formation of the outer reality based on the Self-Consciousness' Focus Dynamics as the main functional mechanism of the Macrocosmos' Creative Activity. A detailed comparison of the author's hypotheses with existing scientific conceptions allows to draw parallels with the current worldviews about nature, space, time, energy and to find the ways for their radical transformation and potential development.

In this volume, the author introduces the conceptual foundation necessary for an adequate understanding of all other lissidiology books of this series. Hierarchy of Self-Consciousness Levels, dimensional differentiation of manifestation Forms, classification of elementary (and other) particles as structural components of the Universal Plasmic-Differentiation Emission, information theory of the formation of Energy in the Macrocosmos are described in order to form necessary notions that will serve as the basis for further more complex iissidiologic Categories:

Universal Cosmic Laws and their Principles, Diapasons of Plasmic Forces, Evolutional and Involutional Branches of development, and many others. The first volume of Fundamentals is the required minimum for any reader who wants to thoroughly study iissidiologic conceptions.
