This new manual takes a systemic approach with each chapter focusing on one body system. The order of chapters will follow the traditional order found in anatomy or anatomy and physiology courses. The photos will include skeletal images, photomicrographs of histology and cadaver dissections. This atlas includes full-color photographs of actual cadaver dissections instead of idealized illustrations, to accurately and realistically represent anatomical structures. The goal is to produce an atlas that is a strong teaching and learning publication and not just a catalog of photographs.
