Regardless of where we live or hail from, we all share that same excitement when we gaze through our binoculars or telescope and look directly at the cosmos above.

Astronomy is about more than just seeing the stars and planets and about building the biggest telescope imaginable. Space is not just three dimensions but the dimension of time becomes exportable and the twisting and maybe even travel through time seems almost possible.

It is interesting to see astronauts from all nations working together while others in their nations are fighting each other. Perhaps the fact that astronomy creates this bond that heals tensions should be a lesson in itself. Rather than cutting back on funding for space programs, perhaps governments should be increasing it.

This book will open your mind to the wonders of this age old science of astronomy and make you see the night sky in a whole new and awe inspiring manner.
